

Developer report of Team 1

By Team 2

Bea Jae Kyeong, Esmanur Karaca

We worked as Team 2. At first, they were three members, but finally, there is two. We worked it by separating our works and making contact by WhatsApp. When we met in a practice class, we discussed how to implement our separated works in uniform work.

Our clients, Team 3, wanted us to make a web page about coding problems, and problem-solving like 'StackOverflow'. They should be possible to register and login to the user account, edit the user profile, search for the problems and solutions, upload problems and solutions.

Guillermo and Bea made mockup pages together, and Esmanur made logos. We have shown our mockups and asked them to select the logo of our Web page. They have selected the logo and the name, called 'CodeForces'.

Bea made Controller Table, and Guillermo asked the client's feedback. They have checked it and approved it. After then, Guillermo was separated from the Team. And Bea and Esmanur worked together.

Esmanur made a web page structure by Bootstrap, and Bea adjusted it into PHP format.

Bea worked on JQuery, Database connection and made authorization and connection of the login page and sign up page. Also, Bea worked on posting problem page, and search page to

see the list of posted problems.

Sometimes we couldn't contact our clients due to their absence, so Bea made a security report out of Team 1. However, we have worked on their last feedbacks in mockups and controller table. And they said they are quite satisfied with our work when we showed our web pages to them.
